

LTECH

DMX512 DECODER

LT-904-DIP

4
CHANNELS

2 kinds of DMX interfaces

Short circuit / Over current protection

www.ltech-led.com

Product Introduction:

1. Designed with 4 channels output, and Max. 6A current per channel, up to 576W output power.
2. Support 2 kinds of DMX ports: 3-pin XLR, RJ45.
3. With RDM remote management protocol, the operations can be completed via the RDM master console, such as parameters browsing & setting, DMX address setting, equipment recognition, etc.
4. With short circuit protection and over current protection, as well as warning function when fault.

5 years

Dip Switch:

RDM Mode: The dip switch 1-10 are OFF.

DMX Mode: FUN=OFF (the 10th dip switch = OFF)
Setting DMX addresses with dip switch 1-9

Self-testing Mode: FUN=ON (the 10th dip switch=ON)

How to set DMX address via dip switch:

FUN=OFF (the 10th dip switch=OFF) **DMX Mode**

DMX address value = the total value of [1-9], to get the place value when in "on" position, otherwise will be 0.

E.g.1: Set initial address to 32.

E.g.2: Set initial address to 37.

$$001+004+032=37$$

E.g.3: Set initial address to 178.

$$002+016+032+128=178$$

* When Dip switch 1-9 are OFF, the defaulted initial DMX address is 1.

Self-testing Mode:

FUN=ON (the 10th dip switch=ON) **Self-testing Mode**

Dip Switch	1-9=off	1=on	2=on	3=on	4=on	5=on	6=on	7=on	8=on	9=on
Self-test Function	Static Black	Static Red	Static Green	Static Blue	Static Yellow	Static Purple	Static Cyan	Static White	7 Colors Jumping	7 Colors Smooth

For changing effects [Dip Switch 8/9=on]:
DIP switch 1-7 is used to realize 7 speed levels. (7=on, the fastest level)

[Attn] When several dip switches are on, subjected to the highest switch value.

As the figure above shows, the effect will be 7 colors smooth at 7 speed level.

DMX Dimming Instruction:

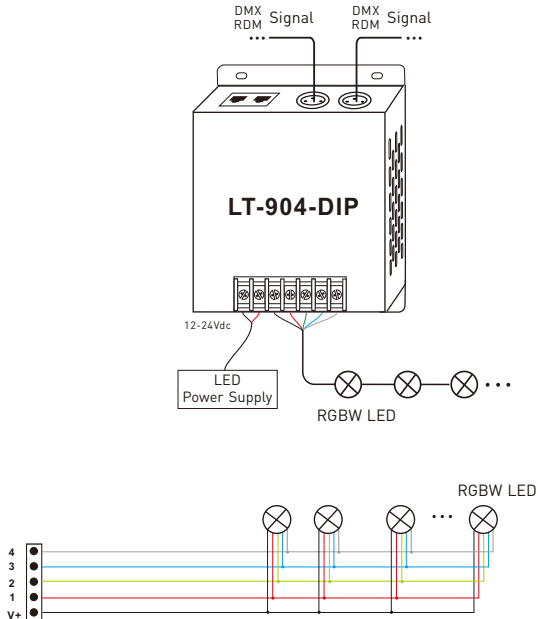

Each LT-904-DIP DMX decoder occupied 4 DMX addresses when connecting the DMX console.

E.g., the defaulted initial address is 1, please find their corresponding relationships in the form.

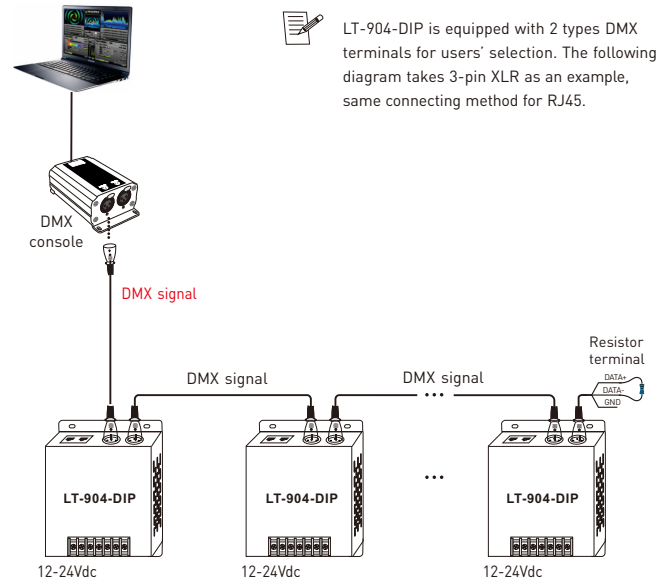

DMX Console	DMX Decoder
CH1 0-255	CH1 PWM 0-100% (LED R)
CH2 0-255	CH2 PWM 0-100% (LED G)
CH3 0-255	CH3 PWM 0-100% (LED B)
CH4 0-255	CH4 PWM 0-100% (LED W)

Wiring Diagram:

1 Connecting LED lights:

2. DMX console connection:

LT-904-DIP is equipped with 2 types DMX terminals for users' selection. The following diagram takes 3-pin XLR as an example, same connecting method for RJ45.

- * An amplifier is needed if more than 32 decoders are connected or use overlong signal line, signal amplification should not be more than 5 times continuously.
- * If the recoil effect occurs because of longer signal line or bad line quality, please try to connect 0.25W 90-120Ω terminal resistor at the end of each line.

3. The connection diagram of 2 kinds of DMX/RDM terminals:

3-pin XLR Connected in Parallel

Installation distance > 20mm

RJ45 Connected in Parallel

These 2 terminals can be connected in a mixed way.

* **Installation Attention** : please reserve enough ventilation distance between decoders (>20mm), be sure not to block the vent, or will affect lifetime of decoder for poor heat dissipation.
