T-300K Operating manual

1. T-300k System features

- A. 32~65536 grade gray level, support software Gamma correction
- B. Support the rules and special-shaped handle.
- C. 8 ports output, one port can support 512-1024 lamp pixels.
- D. On-line (also can SD Card) control, offline control can be multiple controllers used in combination, the contents of the line control program stored in the SD card.
- E. Compatible with single line or double line chips.
- F. If the controller to the lamps distance can choose photoelectric isolated transmission and as far as several distances of up to 200-300 M

Note: the T-300 K controller offline control, each machine controller must put a SD card.

2012 Edition T-300K controller can only be combined with the new version software LedEdit 2012. Using the old software does not support the new version of the controller; the new version of the controller has been print the Chinese sign.

4. The meaning of flag

TTL signal (245 signal):

AC IN	Exchange	COM (common	GND (ground wire)
	220V power supply	port)	
POWER	POWER LIGHT	DAT	Signal
STATUS	Status light	CLK	The clock line
SD CARD	SD card slot		

NOTE: According to TTL signal output, Ground of the controller must be connected

to the lamp ground.

5.System architecture figure

Note: The IP address of the computer should be set to: 192.168.60.178

6. wiring diagram

Note:

1. If the distance between controller and lamps more than 50m we suggest using differential signal transmission control or Photoelectric isolated signal transmission control, please read the manual carefully. Signal lines must be a cable, the best is Super five kinds of cable.

7. Application scope

LED digital tube, LED point light source, the exterior light and a module, pixel screen (dazzle colour screens), high power DMX lighting.

8.Specific parameters:

Memory card:

Type : SD card (if controlling so many lamps it is best to use the high-speed SD card.)

Capacity: 128MB~2GB

Format: FAT

Store file: *.led

Physical parameters:

Working temperature : $-30^{\circ}(\sim 85^{\circ})$

Weight: 1.35KG

Working voltage: AC 85~265V

Working power: 8W

Size: L270mm×W180mm×H55mm

Signal port: 3pin connect port

NOTE: T-300K Support online download the effect-file to SD card.

Before copy files to SD card , The SD card must be formatted as FAT format.

The SD card in controller cannot be hot-swappable, plug the SD card every time, you must first disconnect the power supply

- 9. Differential signal transmission control
 - 1.Purpose:

For many big engineering, the distance between lamps and controller more than 50m and less than 200m.

2、details

built-in Signal transmitter——> signal transmission Repeaters——> signal transmission receiver。

3. Appearance picture

4. Mode of connection:

5、Attention:

the distance, between controller and transmission Repeaters, between transmission Repeaters and transmission Repeaters, between transmission Repeaters and signal transmission receiver can't more than 50m. The maximum distance between controller and signal transmission receiver is 200m.

10. Trouble shooting

Question 1: controller after electrify, indicator light is normal, but the lamps no effect change Answer: the reasons for this are the following:

(1) Please check lamps signal and controller have correct connection.

(2) If it is meet TTL signal, lamps and lanterns and controller must altogether, namely the lamps GND (ground) to the GND and controller (ground) got together.

chip consistent.

Question2

After power, the T-300k ERROR indicator has been flashing without display output answer: The ERROR indicator has been flashing means the controller did not read the card correctly, possible problems:

 \odot SD card is empty, with no effect file.

- ⊜The effect file in the SD card and the controller model are not match, please choose correct controller model in LedEdit and then re-create the effect file *led.
- ⊛SD card did not format to FAT before copy effect files.
- Please check the supply power voltage, the controller can be individually powered to exclude power reasons

Schanging the SD card and then test to exclude the possibility of a bad SD card
